

RoundChain Product Guide

What is RoundChain?

RoundChain is digital arisan (ROSCA). Members save together in rounds. Rules are enforced by a smart contract on Stellar, not by one treasurer.

Before you start

1. Install Freighter wallet (browser extension)
2. Switch to Stellar Testnet
3. Get test XLM + USDC from Circle faucet

Step 1: Create or join

- **Create:** set members, amount per round, round length
- **Join:** open invite link, connect wallet, deposit collateral

Step 2: Circle starts

When the circle is full, payout order is shuffled automatically.

Step 3: Each round

- Scheduled recipient does NOT pay that round
- Other members pay into the pot
- Wait for the round period to end

Step 4: Release payout

If everyone who must pay has paid, anyone can release the pot to the recipient.

If someone does not pay

After the period ends, unpaid members can be slashed. Their collateral helps protect the group.

Trust score

- **+10** when you complete a circle cleanly
- **-25** if you default and get slashed
